Influence of Facebook in Academic Performance of Sri Lankan University Students

By Thuseethan, S. & Kuhanesan, S.
Sabaragamuwa University of Sri Lanka, Sri Lanka

Abstract- Facebook is only an electronic communication among human but unfortunately it has become an addiction for all. Also it is a latest trend of the youth, particularly high level students and the university students as well. This paper examines the usage of Facebook among university students and the influence it has on their academic performance. The impact of Facebook can either be good or bad on university students and their academic activities. Even though a closer look on the real impact of Facebook reveals that it leads to several problems among the university students’ academic performances. Today Facebook is, however, ruining the future and academic carrier of university students. It motivate us to have a closer look to find the significance usage of Facebook by university students in their academic success with the help of a survey conducted by gathering the data among more than 250 students of different universities in Sri Lanka.

Keywords: academic performance, GPA, electronic communication, social media.

Abstract: Facebook is only an electronic communication among human but unfortunately it has become an addiction for all. Also it is a latest trend of the youth, particularly high level students and the university students as well. This paper examines the usage of Facebook among university students and the influence it has on their academic performance. The impact of Facebook can either be good or bad on university students and their academic activities. Even though a closer look on the real impact of Facebook reveals that it leads to several problems among the university students’ academic performances. Today Facebook is, however, ruining the future and academic carrier of university students. It motivate us to have a closer look to find the significance usage of Facebook by university students in their academic success with the help of a survey conducted by gathering the data among more than 250 students of different universities in Sri Lanka.

Keywords: academic performance, GPA, electronic communication, social media.

I. Introduction

Involvement of technology aspects for social needs has become the major communication strategy for most people during past decade. Internet is an inseparable part of human life and it involves in variety of routine activities. Social media has revolutionized corporate communications, rapidly changing the way that public relations campaigns or programs are distributed and measured (Matthews, L., 2010). Social networking has taken the world towards a rich communication society. Facebook, Twitter, LinkedIn and MySpace are the most popular social networking sites providing the electronic communication within society. In the last five years the rapid growth of social media that has been observed is indicative of its importance and its integration into the daily lives of many people in Sri Lanka (Thuseethan, S. and Vasanthapriyan, S., 2014).

Facebook is on lead in the social media race with more active users worldwide. It has become one of the most frequently accessed website present. Facebook was founded in 2004 by Mark Zuckerberg, Eduardo Saverin, Dustin Moskovitz, and Chris Hughes, who are alumni of Harvard. The typical University culture loves Facebook deeply, builds the lifestyle, rather than just a hobby or a fun time passing activity. Academic success is a supreme goal to any student, with the social and family responsibility they have. University students are one of the major group using Facebook for fun, with the main purposes of connecting with their friends, sharing day to day activities, using features such as photo sharing, publishing wall posts, and stating their status updates.

Because of the social media platform’s widespread adoption by college students, there is a great deal of interest in how Facebook use is related to academic performance (Junco, R., 2012). Like other social networking sites Facebook ruins the academic life of university students. In 2008, half of the students were completely unaware of Facebook, while in 2009 all our respondents were aware of it and 59% of them were also using it on a regular basis (Nicola Cavalli, Elisabetta Ida Costa, Paolo Ferri, Andrea Mangiato, 2011). Facebook use is nearly ubiquitous among U. S. college students with over 90% active participation among undergraduates (N. Ellison, C. Steinfeld, and C. Lampe, 2011). Even in developed countries Facebook is widely access by students.

This paper reviews the influence of Facebook in university students’ academic activities and further analyzes both positive and negative impacts of using it.

II. Background of the Study

a) Social Networking Sites

Social media consists of online technologies, practicing activities or societies that people use to generate content and share thoughts, visions, experiences and viewpoints with each other (Television Bureau of Advertising, Inc., 2009). The word social networking is known as the alliance of individuals into specific set of potential groups or subdivisions. Social networking allows individuals to express their thoughts to other users. Social networking is the leader in promoting digital journalism (Thuseethan, S. & Vasanthapriyan, S., 2014). Social network is used for several purposes like promoting or distributing the news contents throughout the world.

Social networking sites and Facebook socializing via the internet has become an increasingly important part of young adult life (Gemmill & Peterson, 2006). Most of the high schools, colleges and universities get connected by internet encompass individuals who are looking forward to mingle other individuals with same point of interest, to gather and share knowledge and first-hand information. Social
networking websites act like an online society of users who is familiar with internet. Social networking is developed with more advanced features after the year 2003. Since Facebook holds the most number of active users it became referred by the name social network. Figure 1 indicates the leading social networks worldwide as of January 2014, ranked by number of active users.

### b) An Overview of Facebook

The advancement in technology and communication leads to a considerable improvement in social networking such as Facebook and MySpace, used to keep in touch or share information with other individuals. By giving people the control over whole site, we are making the world more transparent (Zuckerberg, 2007). Making the world get connected is the ultimate goal behind Facebook. Facebook is an online directory that connects people through social networks in universities (Zuckerberg, 2005).

Facebook was launched in 2004 by Mark Zuckerberg, Dustin Moskovitz and Chris Hughes to help university students in purpose of identifying students who are residing in other residences. One month later, it was expanded by Mark and friends to any Harvard university students. Later, Facebook extended to all high schools local area networks, and then eventually expanded to internet users all around the world. In 2008 Facebook reached 100 million active users, half of them are spending more than 20 minutes in Facebook site per day (Facebook, 2008). Figure 2 shows the rapid growth of Facebook during the years 2008-2013.

![Figure 2](http://www.statista.com/)

### c) Sri Lankan University Students Engagement in Facebook

As like most of other social networking sites, Facebook is a single-page application (SPA) offers a well-organized web page where users’ can store their personal info and make connections with same type of users. The disclosure of friends, not only each user view others personal profile but also their whole networks. This function allows users’ to traverse from friends profile to anywhere, so that individual’s social network grows rapidly across the world (Walther et al., 2008). This ability or capability is the backbone of Facebook and became the only reason of its rapid growth with comparing other social networking sites. Apart from this the simplicity of Facebook is one significant reason for attracts millions of users around the world.
responsibilities and just for fun as well. In university students’ perspective the widespread social media website is Facebook, anywhere between 85 and 99% of university students use Facebook (Jones & Fox, 2009).

In 2012 the World Bank reported that the Internet users in Sri Lanka were last reported at 2.5 million in 2010. Among those most of them are teenagers, Figure 3 shows the distribution of Facebook users in different age groups. Sri Lanka has nearly 1.2 million Facebook accounts, 20% of those are fake accounts (Sri Lanka Police, 2014). Even though there considerable number of legal accounts in Sri Lanka.

![Figure 3: Active users of Facebook in different age groups, Sri Lanka (source: http://www.statista.com/)](image)

The above most recent data, collected by the www.statista.com from Sri Lankan Facebook users shows that of the 43% of Facebook users are in between the age 18 and 24. Most users in this group contain university students, Facebook allows them to express themselves, interconnect, and collect profiles that highlight their abilities and capability throughout lifetime.

Social Networking Sites allow students to express themselves, communicate, and collect profiles that highlight their talents and experience. There are several reasons demanding young people to use Facebook and even also few adults addicted to it and need to use Facebook. Based on them meeting had with university students, the following are some of the reason given by the students for using the Facebook

- Non-stop availability
- Good leisure time activity
- Supportive for studies – sort of collaborative study
- Exchange information among batch mates
- Easy access to publish social events, posts, photos and videos
- Mind soothing and stress free
- Uncluttered and clean interface
- Discovery and explore the interests in both academic and personal interest

**III. Methodology**

a) **Information Gathering**

Information gathering was done through a web based survey among university students. Students who use the Facebook selected for this study. The web questionnaire was designed and distributed to selected students from five Universities across Sri Lanka – Sabaragamuwa University of Sri Lanka, University of Jaffna, University of Peradeniya, Wayamba University of Sri Lanka and University of Kelaniya. To get truthful information the university students were requested to respond the questionnaire anonymously.

The survey was carried out with the participation of 287 students. In the sample, only 32.5% students were from non-science streams and others were from science stream. The majority of students are full time course followers (91%).
b) Measurement of Variables

The following variables were used to develop and test cases;

i. Time spending on Facebook

In this study, time spent on Facebook measured as how often he/she visits the Facebook and spends how much time by actively using Facebook. We categorized the frequency and time spending on Facebook in following manner.

<table>
<thead>
<tr>
<th>Category</th>
<th>Number of times per day</th>
</tr>
</thead>
<tbody>
<tr>
<td>A-1</td>
<td>Below 2</td>
</tr>
<tr>
<td>A-2</td>
<td>2-5</td>
</tr>
<tr>
<td>A-3</td>
<td>More than 5</td>
</tr>
</tbody>
</table>

Table 1: Categorization of students in terms of frequency of access per day

<table>
<thead>
<tr>
<th>Category</th>
<th>Number of hours per day</th>
</tr>
</thead>
<tbody>
<tr>
<td>B-1</td>
<td>Below 2</td>
</tr>
<tr>
<td>B-2</td>
<td>2-5</td>
</tr>
<tr>
<td>B-3</td>
<td>More than 5</td>
</tr>
</tbody>
</table>

Table 2: Categorization of students in terms of number of hours per day

ii. Grade Point Average (GPA)

It varies from 0.0 to 4.0 depend on the grades of the students in Sri Lankan universities’. Categorization of GPA considered in following way as given in Table 3.

<table>
<thead>
<tr>
<th>Category</th>
<th>GPA</th>
</tr>
</thead>
<tbody>
<tr>
<td>C-1</td>
<td>0-2</td>
</tr>
<tr>
<td>C-2</td>
<td>2-3</td>
</tr>
<tr>
<td>C-3</td>
<td>3-4</td>
</tr>
</tbody>
</table>

IV. Results and Discussions

The test cases we defined will inspect the correlation between the frequency or amount of time spent on Facebook and the amount which a student participates in academic activities. Initially we think that there is an inverse relationship between time or frequency with GPA, as the more frequent/time spent on Facebook, the less time a student engage with his/her academic activities. Since majority students falls in to A-2 category, most of the students are moderate users’ of Facebook. Table 4 and Table 5 show the distribution of students in each category.

<table>
<thead>
<tr>
<th>Category</th>
<th>GPA distribution of students with frequency of use</th>
</tr>
</thead>
<tbody>
<tr>
<td>C-1</td>
<td>C-2</td>
</tr>
<tr>
<td>A-1</td>
<td>17</td>
</tr>
<tr>
<td>A-2</td>
<td>18</td>
</tr>
<tr>
<td>A-3</td>
<td>37</td>
</tr>
</tbody>
</table>

Table 4: GPA distribution of students with frequency of use

<table>
<thead>
<tr>
<th>Category</th>
<th>GPA distribution of students with time spending in Facebook</th>
</tr>
</thead>
<tbody>
<tr>
<td>C-1</td>
<td>C-2</td>
</tr>
<tr>
<td>B-1</td>
<td>8</td>
</tr>
<tr>
<td>B-2</td>
<td>12</td>
</tr>
<tr>
<td>B-3</td>
<td>52</td>
</tr>
</tbody>
</table>

Table 5: GPA distribution of students with time spending in Facebook

a) Test Case 1

In this case, occasional Facebook users (A-1) analyzed with corresponding GPA categories, prime factor of student academic performance. Category A-1 students are less interested in Facebook; there may be inverse relationship with academic activities.

![Figure 4: Distribution of A-1 category users']

Of the occasional Facebook users, most of them received high grades, resides in category C-2 and C3.

b) Test Case 2

In this case, medium frequent Facebook users (A-2) analyzed with corresponding GPA categories. Category A-2 students are somehow interested in Facebook but not addicted.
Of the medium frequent Facebook users, most of them received medium level grades, resides in category C2.

c) Test Case 3

In this case, frequent Facebook users (A-3) analyzed with corresponding GPA categories. Category A-3 students are who addicted to Facebook.

Of the frequent Facebook users, most of them received medium grades and low grades, resides in category C-1 and C-2.

d) Test Case 4

In this case, light Facebook users (B-1) analyzed with corresponding GPA categories. Category B-1 students are very occasional users of Facebook.
Of the light Facebook users, most of them received medium and high grades, resides in category C-2 and C-3.

e) Test Case 5

In this case, medium time spending Facebook users (B-2) analyzed with corresponding GPA categories. Category B-2 students are somehow interested to stay in Facebook for some time.

![Figure 8: Distribution of B-2 category users](image)

Of the medium time spending Facebook users, most of them received medium grades, resides in category C-2.

f) Test Case 6

In this case, heavy Facebook users (B-3) analyzed with corresponding GPA categories. Category B-3 students are addicted in Facebook and spend much more time.

![Figure 9: Distribution of B-3 category users](image)

Of the heavy Facebook users, most of them received medium and low grades, resides in category C-1.

V. Conclusion

The study found the correlation between social media usage and academic performance. Most of the heavy or frequent users received low grades, compared to light users. We found similar results with lower grades. By considering Test Case here is a significant difference in Grade Point Average between those considered to be heavy or frequent users of social media and those considered to be light or occasional users. As we employ more time on Facebook, there should be a significant decrement in performance. The results of our study indicate that time and the frequency of using Facebook were predictors of academic performance. In addition, it could predict the quality of life as well.

However, the unanticipated finding was that there are numerous positive usage of Facebook still employed. In future we expect to expand the positive usages of Facebook among university students which help them to increase their academic performance.

VI. Acknowledgments

We would like to thank universities participate in this survey. Extend our sincere thanks to students who spent their precious time and for their assistance and support. Further we would like to acknowledge all friends who assisted us in conducting survey.
