Abstract

The computer and information system are very vital vital element of any organization especially administrative level in education department in this age of computer and internet working. Computer really works in minimizing the work burden and brings efficiency in working profile. The history shows that those nations and organizations which focused on their technological improvement proved very successful organizations and nation on the planet. This study has been conducted in an education administrative department where most of the work was done manually rather than using the advanced computer infrastructure and information system. The study surveyed 150 employees of the civil secretariats administrative department of education in Peshawar where both junior and senior level. The study used stratified random sampling technique creating strata's for both junior and senior level employees. The self-administered 15 items questionnaire was used tested for validity and reliability. The results found that both type of employees have been benefited from the application and use of computer and information system.

Index terms— Information technology, information system, internet, web, infrastructure, architecture, administrative staff.

1 I. Introduction

he emergence and advancement in IT, advance technology and internetworking infrastructure and architecture has caused dramatic revolution in all aspect of human endeavor. The technological advancing, IT applications and technological elements have changed the demonisms and dynamics of businesses and organizations. The IT and IS advancement and internetworking has really changed and shifted human being from industrial age to computer and information age (Digital age) and world become digital world in which every activities strictly done over IT and different IS are interlinking by communicational network internet and internet is live oxygen though which the whole world is connected). IT applications and strong internetworking infrastructure has caused sources of opportunities in business and organizations. The technological advancement and computer modernization has made the transformation of information easy, speedy anytime and anywhere. IT and IS based system applications and internetworking infrastructure has improved the efficiency functionality and flexibility of the organizations and business. Through IT based strategy have perhaps even changed the business models of the organizations and has made them much diversified organizations. Computer applications and internetworking infrastructures have become the more indispensable vehicles of the vital development, improvement and have made the actualization of resources. Debela (2009) stress that IT automata have really affected the performance of blue color workers. He argued that a computer application has made them more efficient workers than before. Computer technology is very vital for both public and private organization as it helps in org planning, controlling, directing, budgeting and reporting.

The computer technology applications and internet has key contribution and usefulness in the society. Its importance has been witnessed in health, military, judiciary, business, education and other parts of the country society. Computer technology has caused improvement in service delivery, operation execution, transformation and finishing of the products. Pakistan is a developing country in transition phases of computer technology and internetworking infrastructure .most of government t organization have adopted the application of computer ,internet and web based information system in their operations and decision making process. This research is aimed is public secret rerate employee of Peshawar.

2 II. Problem Statements.

Pakistan is a developing country in which most of the organizations process data and services delivery manually .public secret rate Peshawar is among the public sector organization which has adopted the application of IT and IS practice. as to know how to much the organization has succeeded in covering the improper and poor means of information and processing .this research investigate the impact of computer and information system on the efficiency of employees.

3 III. Objective of The Study

The main objectives of conducting this research study are the following 1. To investigate the impact of computer technology, internet and information system in the efficiency of The history shows that those nations and organizations which focused on their technological improvement proved very successful organizations and nation on the planet. This study has been conducted in an education administrative department where most of the work was done manually rather than using the advanced computer infrastructure and information system. The study surveyed 150 employees of the civil secretariats administrative department of education in Peshawar where both junior and senior level. The study used stratified random sampling technique creating strata's for both junior and senior level employees. The self-administered 15 items questionnaire was used tested for validity and reliability. The results found that both type of employees have been benefited from the application and use of computer and information system.

Abstract-The computer and information system are very vital Peshawar secretariat employees of education sector. 2. To find the contribution of IT and information system in the organization planning, controlling, coordination, budgeting and reporting. 3. To know the importance of computer technology applications, internetworking (internet) and web based information computerized system as compared to the manual information (Traditional information system). 4. To suggest measures on the bases of findings of this research.

4 IV. Literature Review

The IT (information Technology) and IS (information system) based strategy bring positive revolution in the performance of the organization such are business firms ,health care centers, battle field management, traffic control system in area of critical operational management and decision making in complex situation for the operational managers and executive managers .The IT & IS strategic planning having greater opportunities such are improved employees performance ,standardization of services, strong collaboration various activities, strong and sustainable consumers relationship from the services and from employee of the organization and real time communication to consumers and organization achieved their goals effectively in shorter time by investing limited resources and limited financing.

Through the implementation of IT & IS based strategic planning the organization become intelligent and due to intelligence the administration and operation of organization will be effective so the organization become smart and smart organization achieved the their objectives successfully .

Different IT techniques like data base management system for data management of the organization, data warehouse, data mining ,cloud computing ,virtualization ,remote computing ,data grading ,mobile computing ,crowd sourcing, GSM, GPS, ubiquitous computing techniques and information system centralized ,distributed and web based information system similarly the modern infrastructure s and architecture of IT also play a important contribution in smart organization . Debela (2009) stress that IT automata have really affected the performance of blue color workers. He argued that IT applications have made them more efficient workers than before. Computer technology is very vital for both public and private organization as it helps in org planning, controlling, directing, budgeting and reporting. IT implementation and IS support and improves the delivery of services at very excellent pedestal due to high processing and better quality of management and the performance in both private and based strategy in the organization help in operations like transaction, controlling the transaction, other offices automation daily customers recording, employees attendance record, security concerned issue ,budgeting ,reporting and IT & IS based strategy also support critical decision which are taken by the organization managers, operation managers and executive managers of in shorter me with accurate analysis design best decision making in complex situation ,IS is the strategic engineering of IT infrastructure and architecttue disciplined to combine people ,software technologies, hard ware technologies, telecommunication network technology and data base technologies that accept data from external environment ,process data, stored the information/data and produces output reports to external environment for various sort decision maker of the organization. Fountain (2007) suggest that government organization require to distribute the work of organization because work distribution bring great revolution in services and management and the administration will be effective by decomposing /splitting the structure of organization so performance will be improved .this only possible by implement IT based strategic planning for administration and services distribution and the cost, time and resources will be better managed.

Zambran(2008) recommend that IT based strategy planning the services of the organization improved instead of manual information system in organization .He suggested that IS is reliable and cost effective and computerized based system eliminate the problem redundancy of data in the organization, bring accuracy ,sharing of information in the organization and their consumers, reliable backup facilities ,up gradation and maintenance facilities,

integration and integrity ,free infrastructure data advisability, security and privacy so all these are IT based planning through which the performance of the organization Aribisala (2008) asserted that IT infrastructure is absolutely important for better and effectively managing and coordinating the health care organizations, battle field are very necessary for day world .in health center the patient monitoring effectively computerized based system is important and similarly when army deployed in battle filed the proper coordination is necessary for real time operation so without IT based techniques it obviously difficult in this age of technology ,similarly industrial processing system the different activities monitoring at real time is important like product designing industries temperature and cooling condition detection is so critical important and IT based strategy is necessary for communication in organization because traditional communication are costly and IT based calling system are reliable for communication Harthony (1990) (2011) the web based computerized information system the for business firm assist the business and all the business activities are linked to web so the business become e business and e business all the activities are strictly done over the web so its also called web based business all supported activities or subcategories like e marketing commerce ,e banking mailing shopping purchasing ,e trade ,e knowledge learning ,e ordering all activities defiantly support business .if INFORMATION TECHNOLOGY based strategic planning are deployed for business today then business can achieved the objectives in shorter time with limited resources .INFORMATION TECHNOLOGY based business has various benefits for the firm and consumers .e business ,customer satisfaction is high and strong and sustainable relation build with customer, INFORMATION TECHNOLOGY based business will be globalized because internet based marketing worldwide customer are created so customers purchased ratio to sale will be high and ultimately business firm getting high revenues which is main goal of every business firm in shorter interval of time, price reduction ,standardization of services, customers feedback ,competitive advantage ,24 hours engagement of customers, and free services and employee services performance is vision of INFORMATION TECHNOLOGY based tactic of business.

5 V. Research Hypotheses

H0: There is no impact of computer and internet working on the efficiency of civil secret rate employee of Peshawar in education sector. H1: There is positive impact of computer and internet working system on the efficiency of civil secretariat employee of Peshawar in education sector. H0: There is no significant difference between the efficiency of junior and senior level employees due to computer and information system. H2: There is significant difference in efficiency of junior and senior level employee due to computer and information system

6 VI. Methodology

This is a descriptive research .The data of this research was collected from 150 employees of civil secretariat education sector in Peshawar. The employees of the civil secretariat education sector in Peshawar were segregated in different stages .The employees were distributed in junior and senior levels. So the stratified random sampling technique was adopted in this research study.

The questionnaire of this research was comprised of 15 items. The research questionnaires was self-administrated, the questionnaire was validated and checked for reliability. T-test has been applied to conclude the results.

7 VII. Data Analysis

The below tables indicating the result of the impact of computer and information system on the efficiency of civil secretariat education department employees. In the below table 1 represent junior level employee and 2 represent senior level employees. The results suggest that there is no difference in the efficiency of junior level employees and senior level employees. The levene, s test suggest that the impact of computer and information system has an impact on the efficiency of the civil secretariat employees of education sector and there is no difference in the efficiency of both junior and senior level employees. As the Levins, test value is insignificant at 5% probability. Both employees level showing similar responses to computer and information system on the employee's efficiency. All classes of employees are benefited from the uses of computer applications and information system.

8 H

9 VIII. Conclusion

This research was aimed at knowing the impact of computer and information system on the efficiency of the employee in education department of civil secretariat Peshawar. The research was conducted using selfadministered questionnaire analyzing 150 junior and senior level employees for the purpose. The results revealed that computer and information system has positive impact on the employees of efficiency in this particular organization employees. The results suggest that computer has same impact on both level employees.

achieved their goals effectively in shorter time by investing limited resources and limited financing. The IT (information Technology) and IS(information system) based strategy bring positive revolution in the performance of the organization such are business firms, health care centers, battle field management, traffic control system in area of critical operational management and decision making in complex situation for the operational managers and executive managers. The IT & IS strategic planning having greater opportunities such are improved

164 employees performance, standardization of services, strong collaboration various activities, strong and sustainable
 165 consumers relationship from the services and from employee of the organization and real time communication to
 consumers and organization achieved their goals effectively in ¹

communication of text. audio, video, image ,voice data
 and now web based system carry strong GPRS in
 reliable manners different companies manufactured and
 designing the communication network equipment like
 hub, switch, router, terminal devices like laptop,
 desktop, mobile devices and wireless and wire media
 and speed of internet bring effective communication
 infrastructure and communication become chippers
 and reliable. Olorunsola and Ekong (2006) stressed that
 e mail is reliable and cost effective and secure method
 of data transferred in the organization this also a great
 contribution of IT in organization Ajayi and Ayodele (2002) stated that
 IT bring excellent changed in GDP of country and the economy become
 emerging economy so puts vital importance in
 economy development. According to Bhuiyan (
